PROFILE

Fifth-year engineering student (IATD-SI, ENSAM Meknès) seeking a final-year internship in MLOps / ML engineering. I have packaged a prediction service (FastAPI, Docker, DVC, PSI drift detection, tests) and orchestrated a multi-service platform (Docker Compose, Celery, Redis, TimescaleDB). Data science internship at Technocolabs (2025).

Fast, continuous learner: picked up Julia, Rust, Unity / AR, RL and MLOps through my projects — I never stop learning.

SKILLS

MLOps: DVC, MLflow, drift detection (PSI), schema validation (pandera), scheduled retraining
Deployment: Docker, Docker Compose, FastAPI, Celery, Redis, PostgreSQL / TimescaleDB, Supabase
Quality: pytest, API testing, JWT authentication, Git
ML: Python, LightGBM, scikit-learn, Isolation Forest
Other: TypeScript / Next.js, React, SQL, Rust

EXPERIENCE

Full-Stack Developer Intern — DigiScia, Ouagadougou (Burkina Faso) Jul – Sep 2026

- SimpleOQuotidien project (connecting small-trade service providers with clients: search, quotes, assignment); my part: the front-end, in Next.js.

Data Scientist Intern (remote) — Technocolabs Softwares, Indore (India) Aug – Oct 2025

- Team project “Startup Acquisition Analysis & ML Pipeline”: predicting startup outcomes (acquisition, closure, IPO, continued operation).
- My part: decision trees and SVM on the “companies” dataset.
- Contributed to preprocessing, feature engineering and cross-validation (per the certificate).

PROJECTS

Avilyre — supplier risk management SaaS Python, LightGBM, FastAPI, Next.js, Supabase

Academic capstone project, solo · avilyre.com

- Packaged ML service: FastAPI with API key, Docker, reproducible DVC pipeline, data schema validation (pandera), optional MLflow experiment tracking.
- Drift detection (PSI) returned with each prediction; automatic retraining with a global fallback model for new accounts; fallback to a TypeScript model when the service is down.
- pytest suite (drift, features, serving, end-to-end training on synthetic data); Next.js / Supabase application live online.

AVIEN — industrial predictive maintenance FastAPI, Celery, Redis, TimescaleDB, Next.js, Docker Compose

Academic project, June 2026 · supervisor Prof. Smail Zaki

- 5-service Docker Compose architecture: FastAPI API, Celery worker, Redis, TimescaleDB, Next.js frontend.
- Scheduled retraining of the anomaly model, alerts converted into work orders, JWT authentication, multi-tenant.
- Limitations stated in the report: simulated data, no quantitative evaluation for lack of labels.

Mechora — mechanical engineering calculations (SaaS) FastAPI, React, TypeScript

Personal project

- Calculation engines (beams, shafts, bearings, gears, keys) behind a FastAPI API, React/TypeScript frontend.
- 221 pytest test functions written (calculation core and API).

EDUCATION

Engineering degree — ENSAM Meknès, IATD-SI track 2022 – 2027 (degree expected 2027)
